Xingjian Zhang

(+33) 663899163 | xingjian.zhang@polytechnique.edu

Education

École Polytechnique, Institut Polytechnique de Paris — France
PhD. candidate in Bioengineering — 2023 - Now
M.S. in Biomechanics and Biomedical Engineering — 2021 - 2023
B.S. in Computer Science and Mathematics — 2018 - 2021

Publications

Peer-reviewed articles

1. *Modeling and predicting second harmonic generation from protein molecular structure*, Physical Review X, 2024
   B. Asadipour, E. Beaurepaire, X. Zhang, A. Chessel, P. Mahou, W. Supatto, MC. Schanne-Klein, C. Stringari
2. *Interpretable exact linear reductions via positivity*, Computational Methods in Systems Biology, 2021
   G. Pogudin, X. Zhang

Pre-prints

1. *Label-free multimodal non-linear microscopy to probe metabolism and myelin distribution in organotypic cerebellar slices*, 2024
   B. Asadipour, R. Ronzano, J. Morizet, X. Zhang, A. Chessel, P. Mahou, M. Aigrot, B. Stankoff, A. Desmazieres, E. Beaurepaire, C. Stringari
2. *BioImageLoader: Easy handling of bioimage datasets for machine learning*, 2023
   S. Lim, X. Zhang, E. Beaurepaire, A. Chessel

Experience

Doctoral Researcher @ LadHyX, École Polytechnique | LTCI, Telecom Paris — Nov 2023 - Now

- Research on dynamic cellular nuclear deformations on microgroove substrates to develop a functional in-vitro diagnostic tool for laminopathies and breast cancer.

Deep Learning Intern @ Dassault Systemes — Mar 2023 - Sep 2023

- Deep learning research in 3D tumor segmentation. Designed and developed AI models for the TWINONCO project.

Research Intern @ LOB, École Polytechnique — Apr 2022 - Mar 2023

- Image processing to segment axons and dendrites of mouse cerebellum images from THG microscopy. Developed segmentation tools for noisy 2D THG images and validated on 3D Imaris tracings.
- Modeled muscle fiber orientations of myosin/collagen/tubulin in zebrafish images from pSHG microscopy. Developed an algorithm to compute in-plane and out-of-plane fiber angles using structure tensors in Python. Automated Matlab code to compute anisotropy factor of different harmonophores.
- Development of Python library bioimageloader for wrapping bioimage datasets in a unified interface for machine and deep learning applications.

Research Intern @ LTCI, Telecom Paris — May 2022 - Jun 2022

- Deep learning on various datasets of different imaging modalities such MRI, CT, CXR etc. with different windowing settings to study the optimalities of VOI prior in full acquisition dynamics.

Research Intern @ LIX, École Polytechnique — Sep 2020 - Apr 2021

- Created an algorithm in julia using Fourier-Motzkin elimination to improve the physical interpretability of exact linear reduction for rule-based biochemical systems

Awards

PhD Full Fellowship from École Polytechnique, IP Paris
Master's Scholarship from École Polytechnique, IP Paris

Skills

Programming: Python, Julia / R, Matlab / C/C++, Pytorch and Multi-GPU learning
Languages: Chinese (native), English (proficient), French (proficient)
